"I PUNCTION: SDCCD cleaves DNA hairpin structures. These structures can inhibit DNA replication and are intermediates in certain DNA recombination reactions. The complex acts as a 3->5 double strand exonuclease that can open hairpins. It also has a 5' single-strand endonuclease activity (By similarity).

"SUBUNIT: Heterodimer of sbcc and sbcD (By similarity).

-I- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Rad50 provides an ATP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site (By

DWD IS THE MOST COMMON OF THE WASCLEAR OF STROPHY (BMD). DWD IS THE GISORDER. It typically presents in boys aged 3 to 7 year as proximal muscle weakness causing wadding agit, to e-walking, lordosis, frequent falls, and difficulty in standing up and climbing up stairs. The pelvic girdle is affected first, then the shoulder girdle. Progression is steady and most patients are confined to a wheelchair by age of 10 or 12. Flexion contractures and scoliosis ultimately occur. About 50% of patients have a lower 10 than their genetic expectations would suggest. There is no
